WORK EXPERIENCE

ALLIN

03/2022 - Present

Freelance Developer

- Communication with designer, design file improvement, workflow project
- Selecting technology and building a backend architecture using Express, MongoDB, and web services
- Create a CI/CD system with Github and Github runner.
- Build frontend technology using Nextjs for web applications.
- Congure the VPS Server to run web applications

ALLIN Website - Link: <https://allinvn.net/>

- Realizing a website system that allows users to read stories, search for stories by genres, follow and receive notifications, with the features of loading coins via zalopay payment gateway, to buy stories, donate to stories.
- Users can like stories, chapters, and reviews to accumulate active likes, thereby converting them to corresponding coins. The system allows employees to create new drafts of stories, edit them, schedule their posting, and submit them for review, similar to a story chapter.
- The system allows moderators to browse stories, manage user accounts, and authorize staff rights for accounts.
- The system allows admins to make revenue statistics from copyright stories and donation revenue, and track the number of subscribers and visits.

TECHFARM Company

12/2021 - 02/2022

Frontend Developer

- Participate in building and developing product web applications.
- Make UI/UX from the design file.
- Build features and integrate APIs.
- Combined with QC for inspection, testing, and feature testing.
- Coordinate with PM, BA, Back-End, and QC based on the scope of work in different projects.
- Review, parsing to improve system tools, and work according to the process.
- Research and learn the latest HTML / CSS JavaScript and TypeScript technologies to apply to projects and products.

Main project : Add deposit & withdraw token feature for NFT game

- This function allows users from the website to load tokens from the user's metamask wallet into the game via the smart-contract and the system, as well as vice versa, withdraw in-game tokens to the user's wallet using the smart-contract and the system.
- Allow checking transaction history, calling token deposit orders if the smart contract is running but has not been updated in the game, and the same for withdrawal orders.

EDUCATION

Ho Chi Minh City University of Technology

09/2019 - Present

Major: Computer Science
